

Part 2

② Recently I watched a interesting documentary called "our planet" on TV. It is about nature and the different animals that lives in our world. The cinematography was stunning and colorful.

I learned a lot of thing from this documentary. For an example before watching this I didn't know that some bird change their colours to attract a partner. Also it showed how climate change is affecting north and south pole animals adversely.

I believe that other people would find it interesting too. specially if the love nature. The camera angles were amazing and the narrators voice felt really suitable for this kind of thing.

In conclusion, "our planet" is a great documentary from a toddler to a 100 year old. I recommend you to watch this from my heart. Because it teaches important thing about earth.

Part 1

Many people think about how life was in the past. Some people believe that the past was better but in my opinion life today is ~~more~~^{much} more easy and comfortable than 100 years ago.

Firstly, let's look at health. One century ago medicine were not advanced so people died for simple illnesses. Today, we have excellent medical practises and infrastructure, and the life span is better than never.

Secondly, entertainment is very different now. In the past, people did not had televisions or computers, so they just read books or went for walk. Nowadays we can watch movies, play video games and more.

Finally, communication is faster today. In the past, if you want talk to someone far away, you had to write a letter. It took weeks for arrive. Now, we can send messages instantly, with the click of a button.

In conclusion, I personally think that life is better in the present. Yes those time might be simple, but we have
